

Medical Provider Network

Custom Built. Value Based.

We believe cost containment and quality can, and should, coexist. By focusing on timely return to work, quality care, and convenient medical services, our Medical Provider Network (MPN) solutions yield a high return on investment and efficiencies.

Standard and Custom MPNs

With 5,000+ qualified medical providers, our state-approved MPN, EK Health Select, provides extensive California coverage with expedited implementation.

We also offer a customized MPN to optimize your unique program dynamics. EK Health handles the nominations, credentialing, contracting, worksite panels, website, toll-free phone support, and quality management protocols.

Quality Management

In addition to a stringent due diligence process for adding providers to our MPN, we continually engage with MPN providers, clients, nurses, adjusters and injured employees. Granular MPN activity reporting, quarterly quality meetings, and ongoing provider validation are elements of our MPN program quality assessment.

FEATURES

- Non-discounted, nomination-only network
- Boutique network with hand-selected physicians
- Initial and ongoing credentialing
- Provider data management
- Provider relations
- Dedicated toll-free number staffed by qualified medical access assistants
- Newsflash of immediate updates from the Division of Workers' Compensation (DWC)

- Provider compliance management per contract and handbook
- Provider practice changes via website

BENEFITS

- Duplicate and reconsiderations lower than non-MPN providers
- Average billed per bill, paid per bill and paid per claim is lower than non-MPN claims
- Non-discounted model leads to provider compliance and improved outcomes
- Extensive back-end program analytics and physician scoring allow for continuous improvement

DIFFERENTIATORS

- Custom, hand-selected, nomination-only network with verification of provider quality and experience in workers' compensation
- Non-discounted structure with increased provider compliance, built on relationships
- Continuous provider validation and credentialing
- Outcomes-based model with emphasis on expedient, quality care and treatment against evidence-based guidelines
