

First Step Early Intervention ProgramSM

Predictive Modeling. Proactive Support.

When it comes to medical cost containment, an ounce of prevention is worth a pound of cure. Our First Step Early Intervention ProgramSM mitigates the likelihood of extended claim duration.

This program lowers disability medical payments, bringing payers an unprecedented opportunity to reduce exposures. By recognizing the risk at the earliest opportunity, we minimize the potential for delayed recovery and return to work.

We pinpoint certain risk factors, categorize the risks, and apply intervention protocols to fast track the injured worker toward improved function without the added cost of absences and indemnity payments.

Predictive intelligence empowers payers to lower their exposure to high liability claims, while ensuring the right care at the right time.

FEATURES

- Comprehensive risk assessment
- Proactive categorization of risk — low, medium or high
- Identified within 48 hours of claim inception
- First step in our clinical management process
- Includes a comprehensive plan for medical intervention, treatment and proactive claim management

BENEFITS

- Projections based on physical, psychological and psychosocial factors
- Integrates relevant medical history, including comorbidities like diabetes, hypertension, etc.
- Seamless integration with future medical management
